AMTEX SYSTEM INC.

IT STAFFING IN 2025: REASONS FOR OPTIMISM

www.amtexsystems.com

The year 2024 was marked by a stagnation in IT staffing, a trend that took many by surprise. Historically, IT staffing has been a robust segment, almost guaranteed to grow. However, data from the recent Pulse survey, as explored in the December 2024 IT Staffing Report, revealed a different picture. Despite this, there are reasons to be optimistic about IT staffing in 2025.

AREAS OF EXPECTED GROWTH

Cybersecurity: With the frequency and complexity of cyberattacks on the rise, investment in cybersecurity is expected to increase significantly. According to a Gartner survey, 2,450 of CIOs anticipate increased spending in this area. Despite the current talent shortfall, this presents an opportunity for staffing companies to fill these critical roles faster.

Machine Learning and AI: The hype around AI continues, with companies exploring smaller test cases to drive efficiency. According to SIA's US IT Staffing and Solutions Benchmarking Survey, the highest-demand roles include machine learning engineers, followed by experts in natural language processing, data science, and robotics.

Big Data, Analytics, and Business Intelligence: Big data, analytics, and business intelligence are placed a level below GenAI on the software value curve. They are considered critical for powering AI and driving modern analytics. According to Stack Overflow's Developer Survey, Python is seen as highly desired due to its usage by data engineers, BI developers, and database administrators.

Cloud Computing: Despite being an established area, cloud computing still offers room for growth. As organizations increase their use of cloud for big data, machine learning, GenAI, and IoT, there is a high demand for professionals who can manage and optimize cloud environments.

CONCLUSION

As we move into 2025, the IT staffing industry has reasons to be optimistic. Global spending on IT continues to rise, and there is continued swirl in the IT labor market, especially with the disruption caused by AI. Where there's investment and change, there's always opportunity.

HOW WE CAN REDIFINE SUCCESS?

At Amtex, we understand the evolving landscape of IT staffing and are committed to helping you navigate it. Our extensive network of highly skilled recruiting professionals in cybersecurity, machine learning, AI, big data, and cloud computing ensures that we can fill your critical roles with a targeted approach more efficiently.

Partner with us to turn the challenges of 2025 into opportunities for growth. Contact Amtex today to learn more about how we can support your IT staffing needs.
